

ROTARACT CLUB OF SHAHEED SUKHDEV COLLEGE OF BUSINESS STUDIES

Report for the Period: July 2021 – May 2022

LONG TERM PROJECTS

1. Project Srijan

Project Srijan is a venture aimed at revolutionizing the E-waste industry in India by providing convenient disposal options to non-bulk generators of E-waste, with a goal to bridge the gap between the undiscovered formal recycling sector and the underprivileged informal sector and the unaware masses.

Operations and its Impact -

With the downfall of COVID-19 and life returning to normal, offline operations could be reinstated. We were able to restore the normal offline operations of the project which include conduction of E-waste management sessions, placement of the customized E-waste bin and E-waste collection and channelisation. We were able to carry out these activities with ease and efficiency throughout the year.

- **E-waste Management Sessions:**

With the help of an extensively mined database, which included contact details of around 100 college clubs, 120 schools, 20 formal E-waste recyclers and 500+ RWA/Cooperative Society residents, we were able to conduct our E-waste management awareness sessions effectively. We successfully collaborated with IITM Janakpuri, Rotaract Club of Delhi Prudent, Rotaract Club of Ramanujan College, Rotaract & NSS Club of JIMS Kalkaji and Eco Club of JIMS Vasant Kunj for the conduction of these sessions. We received an overwhelming response from them and were even invited offline to conduct these sessions. With the help of these intuitive sessions we were able to impact a large number of people.

- **E-waste Bin Placement and Collection:**

We have been successful in collecting an extensive amount of e-waste through e-waste bins that were placed at the campus/office of our collaborators. To name a few, we placed our e-waste bins at IITM Janakpuri, JIMS Kalkaji, JIMS Vasant Kunj, Rotaract Club of Delhi Prudent and Rotaract Club of Ramanujan, amongst others. In addition to this, we also placed an e-waste bin in the club's college premises

- **E-waste Channelisation to Formal Recyclers:**

We have successfully transported **470 kgs** worth of e-waste to our recycling partner Deshwal Pvt Ltd. and followed all formal protocols for the same. In addition to this, we have **60 kgs** worth of e-waste that will soon be channelized to Deshwal Ltd. in the upcoming months.

- **Renewal of Contracts with Formal E-waste Recycler:**

Talks were organized with our formal recycling partner, Deshwal for contract renewal. We also gathered key industry insights which could help us prepare for our future operations.

Through our operations, we have created a huge impact in our society, contributing towards reducing environmental pollution caused by the harmful chemicals present in e-waste. We have also led to a significant reduction of both carbon and methane emissions. In addition to this, we have helped an increasing number of informal workers, who inhale these toxins without any proper safety equipment, by disposing of this e-waste in a mindful and responsible manner.

Achievements -

- **B-Plan Competitions:**

We constantly participate in various business plan competitions to get insightful feedback which often prove conducive to our development. We participated in Business Plan Competitions organized by the following colleges/institutes-

1. **Miranda House** - Pitched the business Model of Project Srijan and Stood 2nd Runner Up
 2. **NSUT Delhi** - Received personal and professional mentorship from Mr. Rama Krishna, who appreciated our idea and initiative
 3. **Aryabhata College** - The team presented the whole idea of Project Srijan. The judges were overwhelmed with our project and provided very positive feedback for the same
 4. **SSCBS(Hult Prize)** - The team participated in the Hult prize competition which was held in our college premises, an annual, year-long competition that crowdsources ideas from university level students. We finished second in the competition and received positive feedback and valuable suggestions from the judges for further improvement.
 5. **Jaypee Institute of Information Technology** - We stood 3rd in the Ideathon, a business plan competition organized by Jaypee Institute of Information Technology.
 6. **Bizcubator** - We pitched our project in front of judges and other competing teams and adjourned **the Best Project prize** under that competition.
- **Completion of Two Successful Years of Operations:**

Project Srijan successfully completed two years of operations and we got together and reflected upon the incredible work that we have accomplished over the course of the past 24 months. With every passing year Project Srijan grows and crawls closer to its ultimate vision. Keeping in mind the inspiration and vision with what it was incorporated, we will give our best to take this to new heights.

Research, Expansion and Growth-

- **Expansion Verticals:**

Expansion strategies were chalked out and plans were made for team expansion. The team continued its research upon viable waste ventures for the expansion of the project from a multi-dimensional viewpoint resulting in the holistic development of the stakeholders of the Project. Waste Segregation was found to be most feasible in terms of

generating revenue for operations and survey analysis was deeply figured out in order to extract meaningful business plans.

Other expansion strategies that came up during rigorous brainstorming sessions were increasing our reach and expanding our market size by tapping into the E-waste generated by IT Parks, Automobile repair workshops, Malls and Shopping complexes, etc.

We went on several field visits to Nehru Place and its neighboring areas to conduct surveys. The observations were then analyzed thoroughly by us and now we are working relentlessly to build upon these expansion plans and rise above our competitors by maximizing the impact created.

2. Project Kamakhya

Project Kamakhya aims at removing the social stigma attached to menstruation, which is more than just draining of blood. We undertook a variety of activities under Project Kamakhya this year.

Under the new vertical to Project Kamakhya, **Saakaar**, which is an initiative to **up-skill women**, we have been successful to conduct multiple classes for the topics such as MS Excel, graphics, communication and MS Powerpoint with the instructors we have on board and certificates have also been shared for the same to all the 100+ active students.

We have been working on building **Project Chitra**, a new tangent to Project Kamakhya. Under this project, we have successfully collaborated with a social service club of a design school for designing **menstrual comic strips**. It aims to create awareness about menstrual hygiene and destigmatize taboos surrounding it amongst teenagers. It would be coming on a weekly and fortnightly basis and would be distributed online in various whatsapp and telegram groups and also be posted on our social media handles. Now we are working on the marketing of these comic strips by contacting various magazines and blogs.

We had also joined hands with Sachhi Saheli for its campaign **#Abpatachalnedo** on Menstrual Health & Awareness Day. A webinar was held, where we actively took part and each of us stood together for the menstrual campaign by showing a red dot at the back of our palm. We launched **Menstrual cafe** as the result of collaboration with Sachhi Saheli. Under this cafe, we successfully conducted online sessions in different schools with students from classes 6 -10 stressing the importance of menstrual health. The sessions covered the basics of female anatomy and menstruation, busting myths regarding periods and addressed their queries regarding menstrual health. It is done in order to impart much needed Menstrual Education to kids who are on the verge of experiencing their periods.

Two slum visits were conducted in which we took surveys to get an understanding about the resources available and problems faced by women living there. 65+ responses were received and they were analyzed by the whole team to ideate upon the kind of pads that we should produce. Thorough research was done and a field visit to Goonj was conducted to get a better insight into the process of pad production.

We are researching a sustainable product that suits all of our target audience's demands and criteria while also standing out as a product of choice. We have started to look into the domain of single use biodegradable sanitary products. We are also exploring the option of reusable sanitary pads as they are economic, easy to produce and causes no harm to the environment.

We are also planning to participate in B-Plan Competitions and pitching our idea to investors. For which the presentation and pitch has been prepared. We have also been working on increasing our social media reach to use this powerful platform for spreading as much

awareness as we can about the biological process of menstruation, harms of disposable sanitary napkins, alternative sanitary products, etc. In this year we made 45 posts in total. We will start the production soon to make the pads accessible to everyone at a competitive pricing, also helping the poor by supplying them pads at a subsidized rate.

3. Project Utthaan

Since the beginning of the year, we are working on coming up with a new tangent to the project to address the issues stated as per the Sustainable Development Goals. Thereon, we have worked on developing business models, ascertaining costs, need analysis, and feasibility checks to be able to go forward with one project.

The department researched upon various ideas which are as follows:-

- **Hydroponics**

The aim is to teach this technique to underprivileged communities. We identified some vegetables/crops with high demand that can withstand Delhi's environmental conditions. We also visited some hydroponic plants in Delhi NCR to gather relevant information. We got better insights of the entire process starting from planting to sapling to harvesting the crop, and even planned to make the prototype of our product. With this we are also tapping potential markets for the same. Further, the feasibility and cost structure is being researched upon.

We analyzed various target markets and the subsequent raw materials required for creating its prototype such as motor pump, PVC pipes, plant seeds and liquid nutrients

etc. Other aspects that were looked upon were financial feasibility of the model along with its ability to sustain itself over a long period of time.

The plants grown through the process of hydroponics were very temperature sensitive, thereby the set up for hydroponics proved to be very costly as we needed an indoor set up or poly house to maintain the temperatures both inside and outside along with the additional capital being put in its maintenance. Along with the financials of set up, the scale of operations was another aspect that was taken into account along with identification of markets as only large scale producers catered to wholesalers and small scale operators to individual customers

Owing to the sudden spike in covid cases the research work related to hydroponics was put on hold and on ground work became difficult over time, therefore we restricted ourselves on doing further research on feasibility, financials and the technique associated with hydroponics.

- **Plastic bottle waste management**

We did an analysis on plastic waste management and decided to make a prototype from plastic bottles. Taking in consideration the immense amount of plastic bottle waste being discarded in the environment; we decided to make a prototype out of it and supply them as an alternative to wood furniture . Our primary target market included underfunded government schools where these prototypes could be provided at feasible rate.

Having seen a lot of plastic waste gone unrecycled, we researched on how we can reuse plastic bottles and decided to make ottomans from them. To understand the nuances of building a sustainable product, we scheduled a meeting with Mr. Pranav Goel, the Founder of Vital waste Pvt Ltd, a waste recycling and management company based in Kolkata. We got valuable insights from him, which included beginning the project with

accessible raw materials, finding cost effective techniques and setting up logistics and tapping into EPR activities. Hence we made the first prototype on his recommendation which turned fairly durable.

- **Food Waste Management**

We took account of the vegetable, plant and food waste being discarded on a daily basis from the vegetable markets and decided to supply them as a raw material to manure producers around Delhi. Our research dwelt upon understanding the supply chain of big manure manufacturing companies and their method of production.

- **Wheat Straws**

Wheat straws are also being researched as an alternative to plastic and paper straws. The support for this idea comes from the fact that much of the leftover stubble residue is either discarded or put to fire, thereby those leftover wheat stems could be cut to make straws out of them. Our primary target market includes restaurant, cafes and juice vendors, moreover additional research is still being conducted upon the sustainability and feasibility of straws over a long period of time

To accomplish this we contacted farmers from various locations. We also contacted straw manufacturers across the country to know about their business plan, pricing, problems faced by them, and target market. We also got some samples from them so that we can compare their quality with ours. Upon finalizing on some farms, we will further conduct consumer surveys.

Going further with the wheat straw project, we decided to procure 15kg of wheat stubble from farms in Najafgarh and Shiv Vihar. After that we conducted a survey with several cafes in Hudson Lane, in order to understand the demand of our product. Few cafes agreed to keep our straws for testing purposes, one of them being SUB91. After that we did manual cutting and segregation of straws. Further, we have also presented our idea in a business plan competition of National Institute of Security Markets, Mumbai. The final presentation of the same is scheduled on 29th May, 2022 in online mode.

SHORT TERM PROJECTS

1. Project Aaina

Rotaract SSCBS along participated in Project Aaina- an initiative by Rotary International District 3012 to create awareness among the youth and adults about the Importance of Sex Education. We started the project by putting out awareness posts on our Instagram page, addressing topics like misconceptions about Sex Education in India and Importance of initiating a conversation about sex education with your children, and some ways one can do so, and also on Consent, shedding light on important issues such as what consent is and why it is so important. We believe that it is important that kids are educated about sex from a young age in appropriate amount so that they become concerned, productive and able citizens of the society. These posts collectively reached an audience of **1500+** people.

To support Project Aaina, we also collaborated with Rac Vision institute for an essay writing competition on the topic 'Sexuality' under which we submitted four essays to spread awareness to all communities to help teenagers in their prime years to positively understand their sexuality and sexual relationships. We partnered with Rotaract club of Delhi Mavericks and conducted a speaker session on the topic of Sexual Phobias and raised awareness about this topic under Project Aaina

Besides, our club members, Rtr. Eesha and Rtr. Chandinie, donated **15 packets** of sanitary napkins to househelps in their area and their daughters and also talked to them about healthy sanitary practices and thus creating awareness.

2. Project Power of Ponytails

Under the Project Power of Ponytails (an initiative of Rotary International District 3012), the Rotaract Club of Shaheed Sukhdev College of Business Studies planned a week-long awareness campaign around Cancer. We kickstarted the campaign by organising a webinar on “Prevention and Early detection of Cancer in women” in collaboration with Rotaract club of Capital City which addressed issues like Breast cancer, Cervical Cancer and its vaccine, regular visits to your doctor, etc. The webinar was extremely informative and well conducted, and the guest speaker, Dr. Tanupreet answered queries of the audience with utmost sincerity.

We took to our social media handles and shared posts debunking common myths surrounding the disease by replacing them with facts and spreading awareness around hair donation and its significance. We urged the masses to donate their hair and become a part of this change as hair donation is an act of absolute positivity and transmits a feeling of hope among cancer patients. We created an Instagram reel demonstrating real life heroes who have fearlessly fought cancer and come out strong and healthy. Through the reel, we aimed at making people aware that cancer does not always relate to death, it is a disease which can be cured with timely, proper treatment and a strong will power.

Wrapping up our week-long awareness campaign, we shared a reel covering the inspiring story of Ms. Shreya Dogra, who had recently donated her hair in support of cancer patients. She talked about what made her donate her hair, and she also urged others to step forward and spread joy to the cancer warriors. The posts and videos created under the campaign collectively reached an audience of over **4500** people, receiving encouraging messages from the masses which led us to believe we had been successful in creating an impact.

3. Project Artisans

Supporting the aim of Project Artisans (an initiative of RID 3012) of enabling underprivileged women to stand on their own feet and ensure sustainable source of livelihood for their families by training them to produce and market low-cost environment friendly products, the Rotaract club of Shaheed Sukhdev College of Business Studies collected and donated over **2 Kilograms** of the waste clothes from various local boutiques to the district, which will be stitched together by the trained women to produce beautiful products like masks, book covers, scrunchies, etc. while ensuring sustainability of their incomes.

4. Project Saahas

As an initiative under Project Saahas, our team members visited an NGO named Siddharth Memorial Charitable Trust and contributed towards an initiative of this trust called "Ek Prayaas" which aims to educate underprivileged children. We donated a total of **10 new** books on various topics like basic maths, self help, inspirational, children's stories, new books which they needed for their common library, few of which are Malgudi days, Catch 22, Ikigai, The Adventures of Rusty, etc. These books were installed in their library that will be available to over **120 children** of different age groups.

5. Project Zero Hunger

In order to fill the stomachs of as many as we can, the members of Rotaract club of Shaheed Sukhdev College of Business Studies distributed food near their respective places in an attempt to bring respite to the hunger of the needy.

Our team members spread the message of our Project Zero Hunger as they went on to distribute food kits. A typical food kit contained a variety of items such as biscuits, a beverage and a few packets of snacks. The food kits were distributed to over 20 children from different areas, who were overjoyed seeing our team members with these food packets. Seeing the smiles on the faces of those children as they were having their meals made us realise the value of the work we do.

We also donated food kits as a part of the district's food donation drive near Kohat Enclave Metro station today. We donated food packets to 20 underprivileged people.

Our team also fed stray dogs in their respective locations spreading the message of Project Zero Hunger. In this scorching heat outside, we sometimes overlook the fact that these poor creatures are out there all alone. We stepped out and showed compassion to them, which was reciprocated wonderfully by these creatures.

6. Project Anved

Project Anved is a professional development webinar series, aimed at upskilling the community in modern skills.

Under the project, we held a webinar on the topic of "Acing Case Interviews" using Google Meet. Mr. Harsh Agarwal, the Founder of EduYou and a former employee of Goldman Sachs and Duff & Phelps, was our webinar's guest speaker. The webinar addressed a variety of topics, including how to prepare for a case interview, common interview questions, and mastering guesstimates, to offer attendees a general sense of how to ace case interviews.

We led a webinar on public speaking on September 29th, 2021 at 6PM through Zoom. Mr. Amandeep Thind, founder of Brilliance Academy and a famous International Speaker, Trainer, and Empowerment Coach who has successfully held personal development seminars since 2009, was the webinar's guest speaker. With over 80 attendees, the webinar received an amazing response. For the successful completion of the webinar, Rotaract SSCBS collaborated with Dadri Club, Meraki Club, Delhi karma and Northcap University.

Another webinar was organized which covered the journey the Indian Fundamental Rights have gone through over the past 75 years of independence. Ms. Sakshi Gupta, Assistant Professor of Law at Maharashtra National Law University, Aurangabad, was the webinar's guest speaker. The webinar received a good response with an audience of 35+.The webinar shed light upon all the 6 fundamental rights an Indian Citizen enjoys followed by a Critical Analysis of these rights. The event concluded with a very interactive Q/A round.

In an attempt to upskill the youth, we also organised a webinar on Introduction to Guesstimates under Project Anved. The webinar was undertaken by our president, Sheetal Wadhwa, which was very well received by an audience of **95+ students**. The audience was very interactive and we received very positive feedback upon the quality of the webinar.

7. Fundraiser - SHIKSHA

The Covid-19 pandemic has shut down all the schools, colleges and different educational institutions; making online education a necessity for all, irrespective of whether every individual has proper and requisite resources for it or not. This has led to a grievous situation where a large number of children have no facilities for online education. Therefore, we at Rotaract SSCBS decided to take a step to help these children and launched the 'Shiksha Fundraiser', where we held different events and an online crowd-fundraiser at Milaap platform, to help students at SDMC Primary School, under Teach For India, to help them get access to digital education by providing them with smartphones.

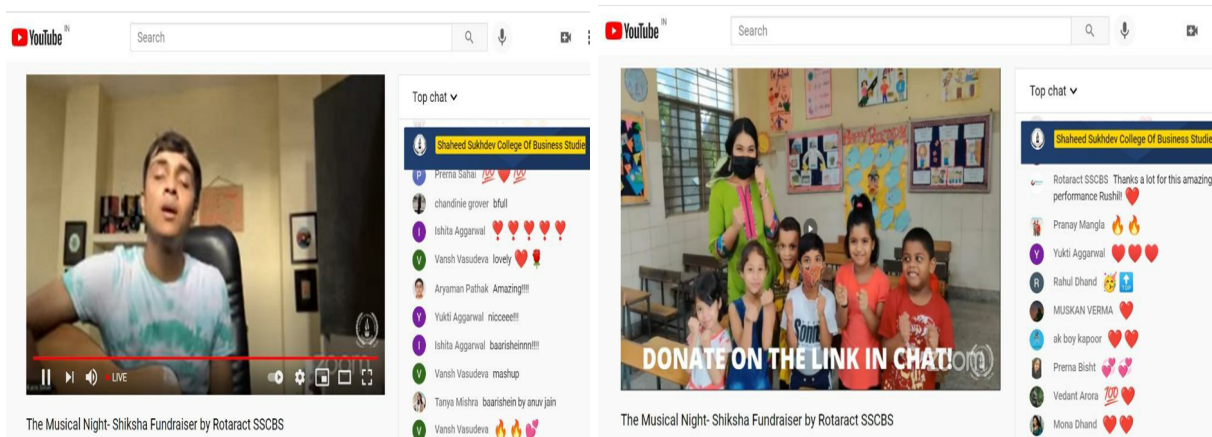

The fundraiser consisted of various events including a gameathon featuring two events- A Pubg Fest and a Tambola Event along with a Musical Night featuring several artists. All the three events were vigorously promoted through our social media handles.

The first event was the Tambola night, where we invited participants through online forms. There was an entry fee of 60/- per ticket and 100/- for 2 tickets in the event. The event was conducted through Zoom and was greatly appreciated by the participants.

Next event was the 'Pubg Fest' where participants were invited through online forms and a participation fee of Rs. 50/- was charged from each participant and the game prize was based on per kill category where a kill resulted in prize of 15/- and the overall winner was given 100/- extra as the winning prize.

Lastly, we held a 'Musical Night', which was live streamed on YouTube for a duration of 2 hours and a total of 7 artists were invited to perform for the event. The heavy encouragement from the audience really helped in boosting the morale of the performers and also uplifted the mood of the viewers. After rigorous promotion by all the members, the event saw an audience of 150+ viewers. No entry fees were charged for watching the event and the entire audience was requested to donate for this noble cause. Rotaract SSCBS partnered with JIMS Vasant Kunj for raising awareness about the event and increasing its reach.

Overall, it was a successful event which received great feedback from the audience and achieved its goal of providing underprivileged students the access to digital education by raising a sum of 10,931 with the help of 41 supporters.

8. Plantation Drive in collaboration with Rotaract Club of Delhi Janak

In an attempt to do our bit to contribute towards conserving our precious mother Earth, we collaborated with the Rotaract club of Delhi Janak in organising a Plantation drive under the District's Initiative of Green Revolution 3.0. Our club members participated actively in this activity by planting as many saplings they could at their respective places.

9. Project Adhyayan

The Covid-19 pandemic had shut down all the schools, colleges and different educational institutions, making online education a necessity for all, irrespective of whether every individual has proper and requisite resources for it or not. This had led to a grievous situation where a large number of children have no facilities for online education, and the situation was worse for the students of blind school organisations. Therefore, we at Rotaract SSCBS decided to take a step to help these children and launched 'Project Adhyayan',

Project Adhyayan was an initiative to help visually impaired children get access to mindfully prepared, comprehensive study material. For this project we collaborated with an NGO "Helping Hands India" under their program "School at home" where students can enhance their knowledge conveniently from their homes even without proper access to the internet. We undertook the task of creating audio recordings of different subjects which were made accessible to these children through a toll free number where they were able to learn about different subjects as well as give mcq based tests.

Under the project we provided deliverables like, converting NCERT books into audio books for the subject, Mathematics for classes 3-10. Specific tasks were allotted to the team members to ensure efficient, effective and smooth working of the project and eventually, its timely completion.

The task of collecting and collating all the chapter wise study material along with 15 practice questions (MCQs) for each chapter was allotted to the boys, while the work of recording the chapter summary and the MCQs, compiling it into a zip file including the audiobook along with the written document containing the chapter content, was allotted to the girls. In all, we converted **120+ chapters** and delivered **25+ hours of content** in the form of audio recordings

10. Blood Donation Camp in collaboration with Rotaract Club of PCTI

The mass-scale vaccination drive coupled with people's fear of contracting COVID-19 at donation sites, has led to blood shortage in blood banks and hospitals. Looking at this worrisome situation, Rotaract SSCBS collaborated with Rotaract club of PCTI for organizing a Blood Donation camp at PGDAV Senior Secondary School, West Patel Nagar. Our Club Service Director, Rtr. Dev Anand stepped forward and donated blood along with coordinating the on ground activities at the camp to ensure that the activity turns out to be a success.

11. Food Donation Drive

With hunger and starvation on the rise amidst the scorching heat, we decided to conduct a food donation drive in some identified slums in Rohini.

This food donation drive was completed successfully on the auspicious occasion of **Eid** on 3rd May. We were able to feed **80+ needy people** from the identified slums in Rohini. These food packages were backed by the funds collected by us, from the college students.

Apart from that, we have a strong presence in our district and have undertaken a variety of activities. We have collaborated with a range of clubs and organizations and hosted a number of webinars, including the following:

- In collaboration with the DSPSR Rotaract club, organized a webinar on stroke awareness.
- As part of Rotaract International District 3012, we hosted a Carbon Footprint webinar.
- In conjunction with Rotaract Club of Delhi Janak, held a workshop on Anxiety Simplified.
- Co-hosted a seminar on Sustainable Menstruation with Rotaract club of Delhi Aakash
- Organized a webinar on how to construct an Ideal Pitch Deck
- In partnership with the Rotaract Club of Delhi Vikas, held a seminar on financial literacy.

Activities planned

The activities planned for the coming year can be majorly classified into the following 3 headers:

1. Project Expansion

- a. **Project Srijan** - The idea is to expand the operations further and spread the objective to formalise and empower the informal recycling sector in India and to educate the masses on the importance and need of proper E-waste management.
- b. **Project Kamakhya** - The Project aims at making menstruation a sustainable process for every woman by reducing the tonnes of menstrual waste.

2. New Projects

The team will also continue to launch new projects as well as new project verticals that can help us to address social problems as and when we identify them going ahead just like last year we launched Project Sakaar within Project Kamakhya and also other projects like Project Jeevan, Adhyayan, etc.

3. Short Term Activities

To create societal impact on an immediate level, the team will continue to take up activities that can help tackle some of society's important issues like Food donation drives, Blood donation camps, Sanitation drives, etc.

What makes us different

At Rotaract, we have distinguished ourselves from other societies by undertaking a myriad of projects simultaneously, which are not just long term projects, but also short term.

As part of our long term projects, we make it a point to realize and implement social entrepreneurship skills into our operations and at the same time bring about significant impact in the society. These are the very core values that our long term projects, namely Project Srijan and Project Kamakhya stand by. Apart from this, Rotaract has a research department which works constantly in bringing about new projects by identifying prevalent issues in our society and devising innovative and feasible solutions for the same.

A brief description of our projects is as follows-

Project Srijan has achieved overwhelming success in its objective to channel e-waste from the informal sector to the formal recycling sector and spread awareness regarding the same. Till

now, we have reduced 45000 kgs of CO2 emissions and 22kgs of methane emissions. At the same time, we have impacted over 59000 people directly and indirectly and delivered over 100 hours of content regarding mindful management of e-waste.

The objective of Project Kamakhya is to eliminate the social taboo on the subject of menstruation and to make economical and sustainable pads. Apart from this, Project Kamakhya aims at spreading awareness about menstrual hygiene and up-skilling women. With this, about 500 underprivileged women were given employment and 7500 were directly and indirectly impacted by the same. Besides this, more than 200 kgs of plastic waste was reduced and around 400 kgs of industrial cloth was upcycled.

Moreover, Rotaract SSCBS has also been in collaboration with various other Rotaract Clubs, both in and out of our district. Together, we have worked on various projects and sessions to bring about some difference in the society.

The short term department works towards bringing an immediate impact in the society. As far as the activities are concerned, we have organized blood donation camps, food donation drives, plantation drives, book donation drives and cloth donation drives. We also helped small vendors sell their products in the areas of CP, Sarojini, Lajpat Nagar and Karol Bagh. These activities have helped us work towards SDG Goals like Zero Hunger, Good health and Well being, Sustainable Cities and Communities and No poverty. Apart from that we also interact with orphans and old age people. One of our recent activities was a painting competition conducted in one of the orphanages.

Hence, Rotaract SSCBS has consistently proven its value and competence towards the virtue of social well-being and bringing about a real impact on society.
