

Paper waste collection drive

Mode : Offline

Date: 30 October

Number of participant: 150-200

Paper waste is a major environmental challenge, leading to deforestation, pollution, and greenhouse gas emissions. When paper decomposes in landfills, it releases methane, a potent greenhouse gas that worsens climate change. Additionally, paper production requires significant water and energy, worsening environmental degradation. It's crucial to promote sustainable practices and raise awareness to tackle this issue.

Recognizing the urgency of the situation, Enactus SSCBS initiated a comprehensive paper waste collection drive within our college premises. The drive aimed not only to mitigate the harmful impact of paper waste but also to foster a culture of environmental responsibility among students and faculty members alike. The success of our paper waste collection drive surpassed our expectations, with active involvement from students, faculty, and staff members across the campus. Conducted various games for audience engagement and make the drive success .Through collective efforts, we were able to collect a substantial amount of paper waste, diverting it from landfills and facilitating its proper recycling.
